SCOTT O'NEIL

QE ENGINEER

Portland, OR | jobs4scotto@gmail.com | linkedin.com/in/scottoneilpdx

QE engineer with 4+ years in software quality assurance, working both sides of quality: hands-on exploratory, regression, and new-feature testing, release coordination, and bug triage, alongside automated test suites in Python and TypeScript integrated into CI/CD. Brings 10+ years of customer-facing experience to clear defect reporting and cross-platform coverage across web, mobile, and desktop, using AI tools like Claude and Gemini to speed up test design.

SKILLS

- **Languages:** JavaScript, Python, C#, TypeScript
- **Automation Tools:** Selenium, Cypress, Playwright, Appium, Robot Framework
- **Testing:** E2E, Regression, Exploratory, API Testing, UI Testing
- **Platforms:** Windows, macOS, Android, iOS
- **Version Control / CI:** Git, GitHub Actions, CI/CD pipelines
- **Frameworks & Libraries:** React, React Native, .NET MVC
- **Others:** Jira, Asana, TestRail, Postman, REST APIs, Agile/Scrum
- **AI Tools:** Claude (test case generation, testing support, script drafting), Gemini (Google Workspace docs, summaries), prompt engineering

WORK HISTORY

QA Analyst at PlusQA (Feb 2026 - Present)

Release Coordination & Hands-On Testing

- Coordinate 4 releases a month on a weekly beta cadence, running regression testing across 10+ devices to confirm each build is ready to ship.
- Test new features end to end, pairing scripted cases with exploratory sessions to surface edge cases early.
- File ~40 bug tickets a month and triage incoming issues, reproducing, prioritizing, and routing them to the right developers.

Automation Engineer at PlusQA (Aug 2021 - Nov 2024)

Cross-Platform Testing & Release Validation

- Designed and executed **E2E, regression, and smoke tests** across **Windows, macOS, iOS, and Android** platforms using **Selenium, Cypress, and Robot Framework**, ensuring reliable user experiences and stable releases.
- Collaborated with developers to **identify, document, and track bugs**, escalating blockers during QA standups to maintain smooth release cycles.

Test Planning & Execution in CI/CD

- Built and maintained test plans and 100+ hand-written test cases for both new and existing features, aligned with product and sprint goals.
- Integrated test suites into CI/CD pipelines, proactively identifying regressions and reducing deployment risk.

Test Automation & Framework Maintenance

- Developed **scalable automated tests** using **Python and TypeScript**, prioritizing high-risk and error-prone areas for coverage.
- Removed or refactored 200+ flaky tests (raising the suite pass rate from 65% to 98%) and contributed to **framework enhancements** including screenshot compression, logging improvements, and selector refactoring.

Cross-Functional Collaboration & QA Process Improvement

- Worked closely with engineers, PMs, and designers to ensure full feature understanding and **early bug detection**.
- Drove **quality-of-life improvements** across the QA repo, increasing efficiency and reducing test suite maintenance overhead.

Software Engineering Intern at SharedSaga (Jun 2021 - Jul 2021)

Collaborative Development & Feature Integration

- Led development of a new address book feature through the entire SDLC in a React application, improving performance and user flow.
- Collaborated daily with senior engineers to scope, implement, and review new features.

Backend Development & Endpoint Testing

- Built a no-auth endpoint for user-generated social pages, ensuring stability across environments and input cases.
- Contributed to robust implementation of backend logic using S3 storage credentials and error handling.

Code Quality & Reusability

- Refactored legacy React components into modular, testable code across multiple application areas.
- Participated in performance audits and optimization efforts, increasing rendering efficiency and app responsiveness.

EDUCATION

Epicodus (2020 - 2021)

Full-Stack Development
Coursework:
HTML5 | CSS3 | JavaScript | C# / .NET Framework MVC | REACT
Pair Programming, Unit Testing, APIs
